

Global R&E Routing Table Update

Philip Smith

<philip@nsrc.org>

Network Startup Resource Center

31st May 2022

UNIVERSITY OF OREGON

Motivation

- 1998: No one was publishing any Internet routing table analysis
 - Only CIDR-Report reporting on top 20 contributors to routing table, and top 20 bad aggregators
- 1999: Started weekly report looking at Global Internet Routing Table
 - Routing table size
 - CIDR-Report style reporting on a per-RIR basis
- 2019: Started recording Global R&E Routing Table
 - Feeds from University of Guam and DrukREN (Bhutan)

Goals

- Part of NSRC's NSF INRC engagement:
 - Assessing aggregation
 - Finding local and regional misconfigurations
 - Discovering problems with announcements
 - Encouraging RPKI deployment
 - Helping R&E network operators improve routability
 - Supporting global awareness and compliance with MANRS initiative
 - <https://manrs.org>

Technical

- NSRC collector hosted at University of Oregon
 - Using FRR (<http://frrouting.org>)
 - Technical configuration:
 - <https://bgp.nsrc.org/REN/tech.html>
- R&E network operator sets up EBGP Multihop peering with NSRC collector
 - Sends their view of the global R&E routing table
 - NSRC collector sends nothing – it is just a collector
- Analysis scripts runs daily and reports interesting data:
 - <https://bgp.nsrc.org/REN/index.html>

IPv4 Routing Report 31st May 2022 (DrukREN)

BGP routing table entries examined:	18390
Prefixes after maximum aggregation (per Origin AS):	10491
Deaggregation factor:	1.75
Unique aggregates announced (without unneeded subnets):	11665
Number of IPv4 prefixes with a valid ROA:	3977
Number of IPv4 prefixes with an invalid ROA:	23
Number of IPv4 prefixes with no ROA:	14390
Total ASes present in the Internet Routing Table:	2729
Prefixes per ASN:	6.74
Origin-only ASes present in the Internet Routing Table:	2349
Origin ASes announcing only one prefix:	1096
Transit ASes present in the Internet Routing Table:	380
Transit-only ASes present in the Internet Routing Table:	58
Average AS path length visible in the Internet Routing Table:	7.1
Max AS path length visible:	18
Max AS path prepend of ASN (1149)	11
Prefixes from unregistered ASNs in the Routing Table:	7
Number of instances of unregistered ASNs:	7
Special use prefixes present in the Routing Table:	1
Prefixes being announced from unallocated address space:	2
Number of addresses announced to Internet:	205065728
Equivalent to 12 /8s, 57 /16s and 14 /24s	
Total number of prefixes smaller than registry allocations:	1951

- Some notes about these:
 - 192.31.196.0/24 is listed as “IANA Reserved”
 - 192.88.99.0/24 is listed as “IANA Special Use”
 - It is the **deprecated** 6to4 relay address (RFC7526/BCP196 – May 2015)
 - And: please do NOT use tunnels for IPv6!!
- Generally considered unsafe to transit such address space

- Some notes about these:
 - AS 22063, AS 22226, AS 19658, AS 394607 and AS 395514 are not registered
 - AS 65200 is a Private ASN – must not be routed
 - Why are the transit ASes providing transit to unregistered Internet resources?

Deprecated AS Set

- Use of BGP AS Set is not recommended
 - RFC6472/BCP172 (December 2011)
 - Still some in the BGP table:

Prefixes using Deprecated AS_SET

Net Originated	AS Path
130.184.0.0/16	134715 9885 23855 7660 22388 11537 40581 10508 {10508}

- Looks like an automatic (mis)configuration as the AS_SET above is meaningless

Big prepends

- What is SURFNET hoping to achieve?

```
v*> 145.100.118.0/23      134715 9885 23855 1103 1133 1149 1149 1149 1149 1149 1149 1149 1149 1149 1149 1149 1149 1149 i

IPv4 Observations

- Routing table is quite stable
 - Slight decline, plus decline of overall address space announced
 - (Commodity Internet showing continued linear growth)
- /24 announcements quite stable
- Overall global deaggregation ratio is stable apart from Africa
 - Late 2020: KENET deaggregated
 - Mid 2021: KENET reaggregated

IPv6 Observations

- Global R&E IPv6 table
 - Not much happening:
 - No IPv6 roll out in R&E?
 - Or has R&E fully deployed IPv6?
 - Then on May 20th 2021:
 - CERNET announcement of 4096 /32s from 4096 ASNs
 - In contrast, global table (commodity) is growing quickly
 - Perhaps even exponentially 🥵
