

# BGP Tool Hints

Here are some docs about how to build the various BGP tools out there.

## Building BGPDUMP

First off, we clone the git repo locally. Go to the place where you normally do your development work (for example, /usr/local/src), and:

```
git clone https://github.com/RIPE-NCC/bgpdump.git
```

Next makes sure we have the libraries and packages we need installed:

```
sudo apt install libz-dev autoheader
```
