

Peering Resources

(UPDATED)

The section of the Toolbox dedicated to listing useful Peering Resources

Some are described elsewhere in the Toolbox, others have a short description included here for completeness. As ever, please consult the respective websites for more information.

- [The Peering Database](#) is described [elsewhere](#) in the Toolbox
- [The IXP Database](#) is an authoritative, comprehensive, public source of data related to IXPs. It collects data directly from IXPs through a recurring automated process. It also integrates data from third-party sources in order to provide a comprehensive and corroborated view of the global interconnection landscape.
- [IXP Manager](#) is a management platform for Internet eXchange Points (IXPs) including an administration and customer portal. It provides end to end provisioning as well as both teaching and implementing best practice.
- [Peering Manager](#) is an open-source BGP session management solution designed with features and simplicity in mind, allowing engineers to track, maintain and configure BGP sessions from a centralised management point without the usual tedious manual provisioning task.
